

Repeater PH-ZJQ

The parameter:

working volt (V): DC12V

Static Electricity: 12 MA

Working Current: 150MA-180MA

Operating Frequency : 315MHz & 433MHz

Transmitting time: max: 10s and min: 3s

Transmitting distance: 350M

Learn the code:

Please keep press the learning button for 3s, after the learning LED indication lights blinking then release the button. Then press the transmitting, and then finish learning.

Delete the code:

Keep pressing the button for 3s, and the learning indication lights will tune off then release the button and finished delete the code.

Notes:

1. Blank code, it won't learn and forward transmitting
2. Please note that it's not good if the forward transmitting time is too long, because it will destroy the main board.
3. Middle lights: the transmitting indication light

Left light: learning indication light

Right light: Power indication light.
